

FREE FORM HYPARS

CUSTOM, FLEXIBLE, MODERN

Free Form Hypar structures can span large distances with minimal steel support structure.

Configurations include free standing 4 column, 2 columns and attachments to building or partial struts back to building. Continuous (strapped) edges can be used to waterproof seal the fabric against a building above access doors, etc.

Hypars can be used vertically from high quality PVC mesh fabric to screen summer sun and reduce loads on air-conditioning.

Arranged in succession, multiple Hypars can be used to create a "sawtooth" appearance. Just about any size or shape is possible!
